

Multi directional movements for wide openings...

Telescopic automatic doors consisting of 2 mobile leaves or 4 mobile leaves are used in places with limited space or wide opening is needed. When necessary, all mobile leaves can be fully opened. Thanks to the adjustable opening range of telescopic doors, desired space can be chosen according to the entry traffic frequency or for saving from air conditioning.

- It is ideal for corridor and office sections.
- The belt system allowing the movements of the doors is operated with two motors and suitable for heavy use.
- The motors, control unit and belt system are integrated and no separate workmanship is needed for their assembly.
- 2-leave telescopic door consists of 2 leaves sliding to the same direction. The first leave moves two times faster than the second leave and they simultaneously arrive to the end of the sliding area.
- 4-leave telescopic door consists of total 4 leaves, 2 leaves each sliding in reverse directions.
- In the mechanism, there is an accumulator system to open the door in the event of power failure.
- The motors have 5 year guarantee.
